

Intune & Knox Platform for Enterprise

AUG 2020
Samsung R&D Centre UK
(SRUK)

1. Pre-requisites for Knox Platform for Enterprise
2. Configure Android Enterprise
3. Android Enterprise Deployment Modes
 - Work Profile
 - Fully Managed Device
 - Fully Managed Device with a Work Profile
 - Dedicated Device
4. Configure Knox Service Plugin [KSP]
5. Configure Knox Platform for Enterprise

Contacts:

sruk.rtam@samsung.com

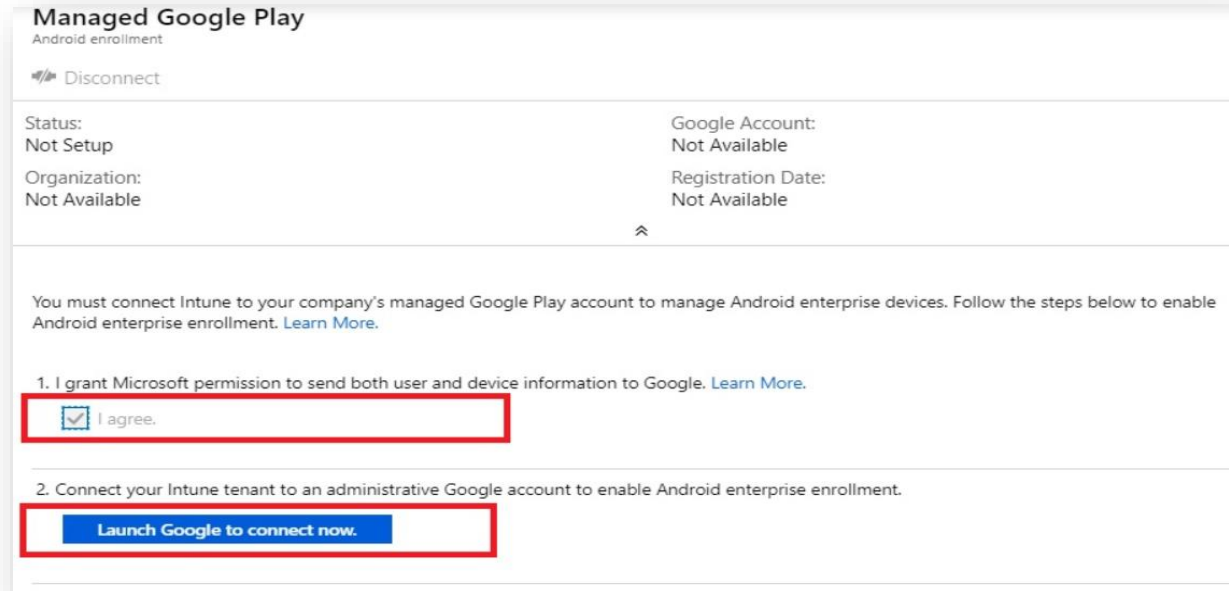

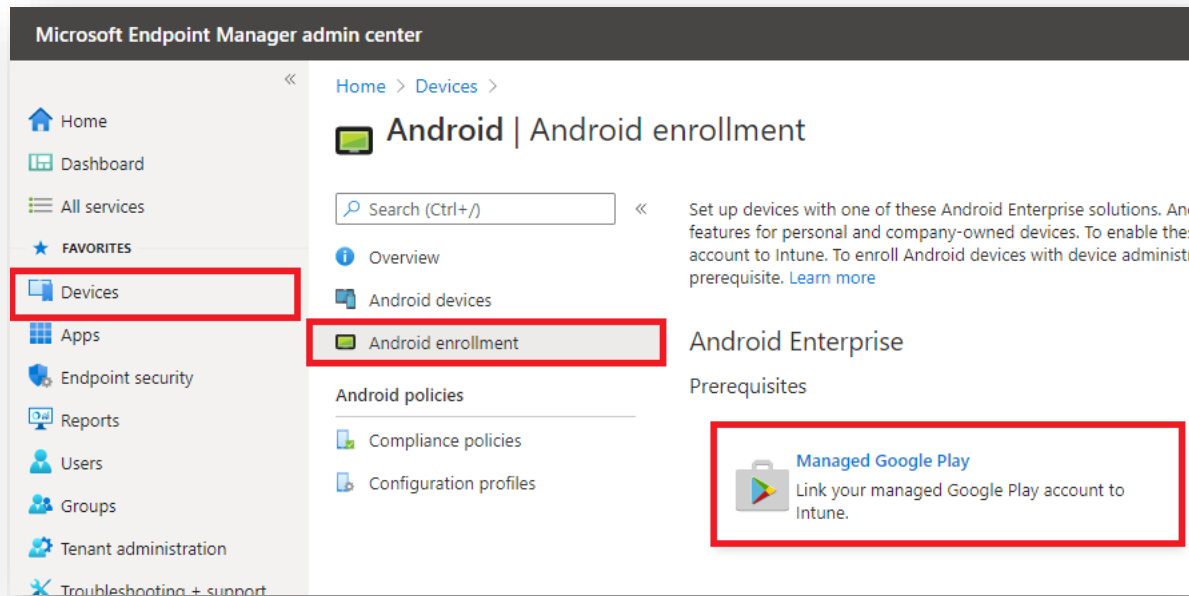

Knowledge Base:

<https://docs.microsoft.com/en-us/mem/intune/>

1. Obtain access to Microsoft Endpoint Manager - Endpoint Manager is the new home for Microsoft Intune. The Intune link within Azure is no longer accessible and Administrators should access the console by using the link: <https://endpoint.microsoft.com>
2. A Gmail account to map to Intune for Managed Google Play
3. Consider what enrollment method to use:
 - Knox Mobile Enrollment (KME)
 - QR Code enrollment
 - Email enrollment
 - Server details enrollment

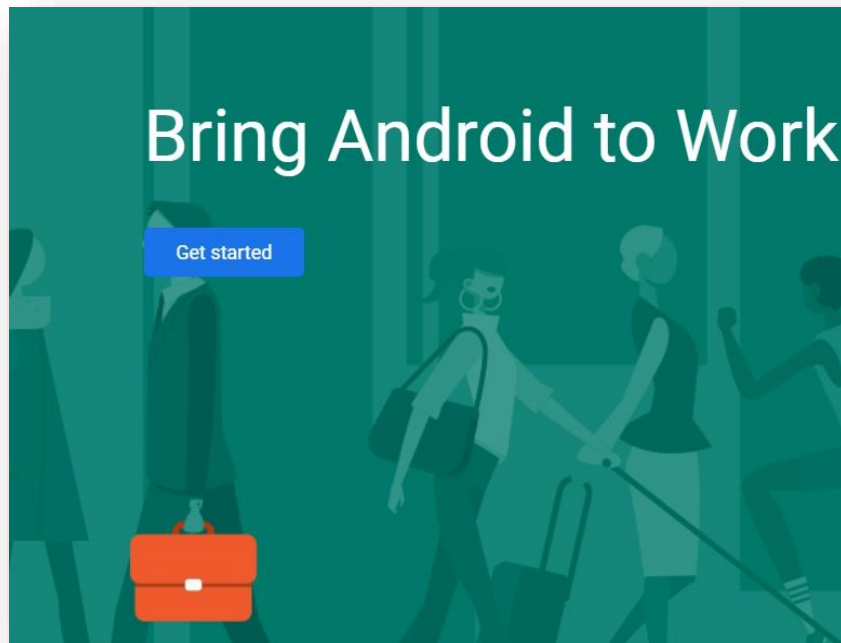

Configure Android Enterprise

- Within Microsoft Endpoint Manager, navigate to: Devices > Android enrollment
- Select Managed Google Play
- Tick I agree and click Launch Google to connect now

Configure Android Enterprise

- Sign into your Google account and select Get Started
- Fill out the Contact details page, tick the Managed Google Play agreement page and then select Confirm. These text fields are not mandatory, so you can alternatively leave them blank and just tick the Managed Google Play agreement and then select Confirm
- Click Complete Registration to complete the Android Enterprise configuration and return to Microsoft Endpoint Manager

A Google Play "Contact details" form. The header is teal with the Google Play logo. Below the header, it says "Contact details" and "We need some details about your key contacts". A paragraph explains that contact details are required for data protection regulations. The form has two sections: "Data Protection Officer" and "EU Representative", each with input fields for Name, Email, and Phone. At the bottom, there is a checkbox labeled "I have read and agree to the Managed Google Play agreement." and a "Confirm" button.

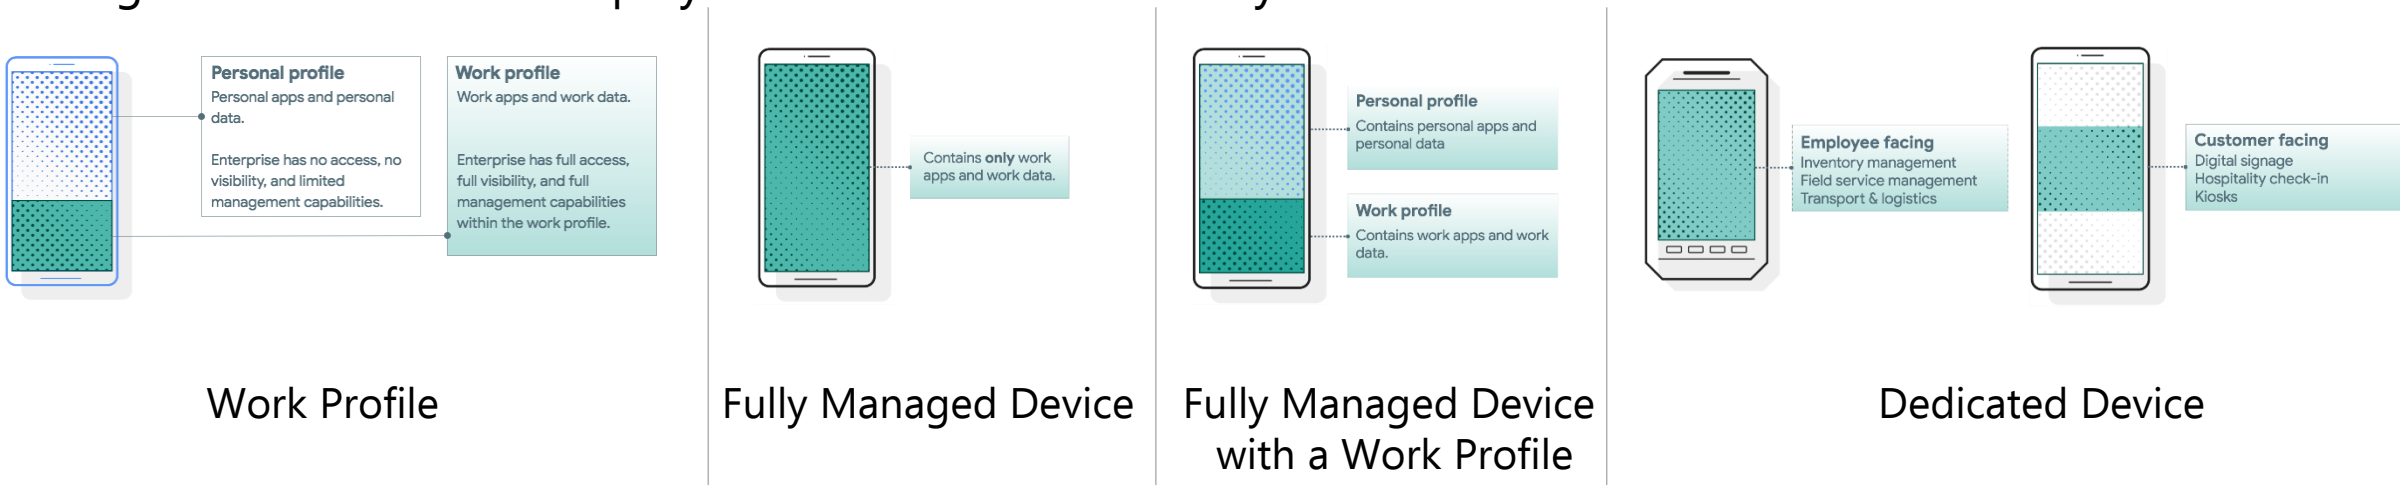

Android Enterprise Deployment Modes

Deployment Modes

Android Enterprise can be deployed in the following 4 deployment modes

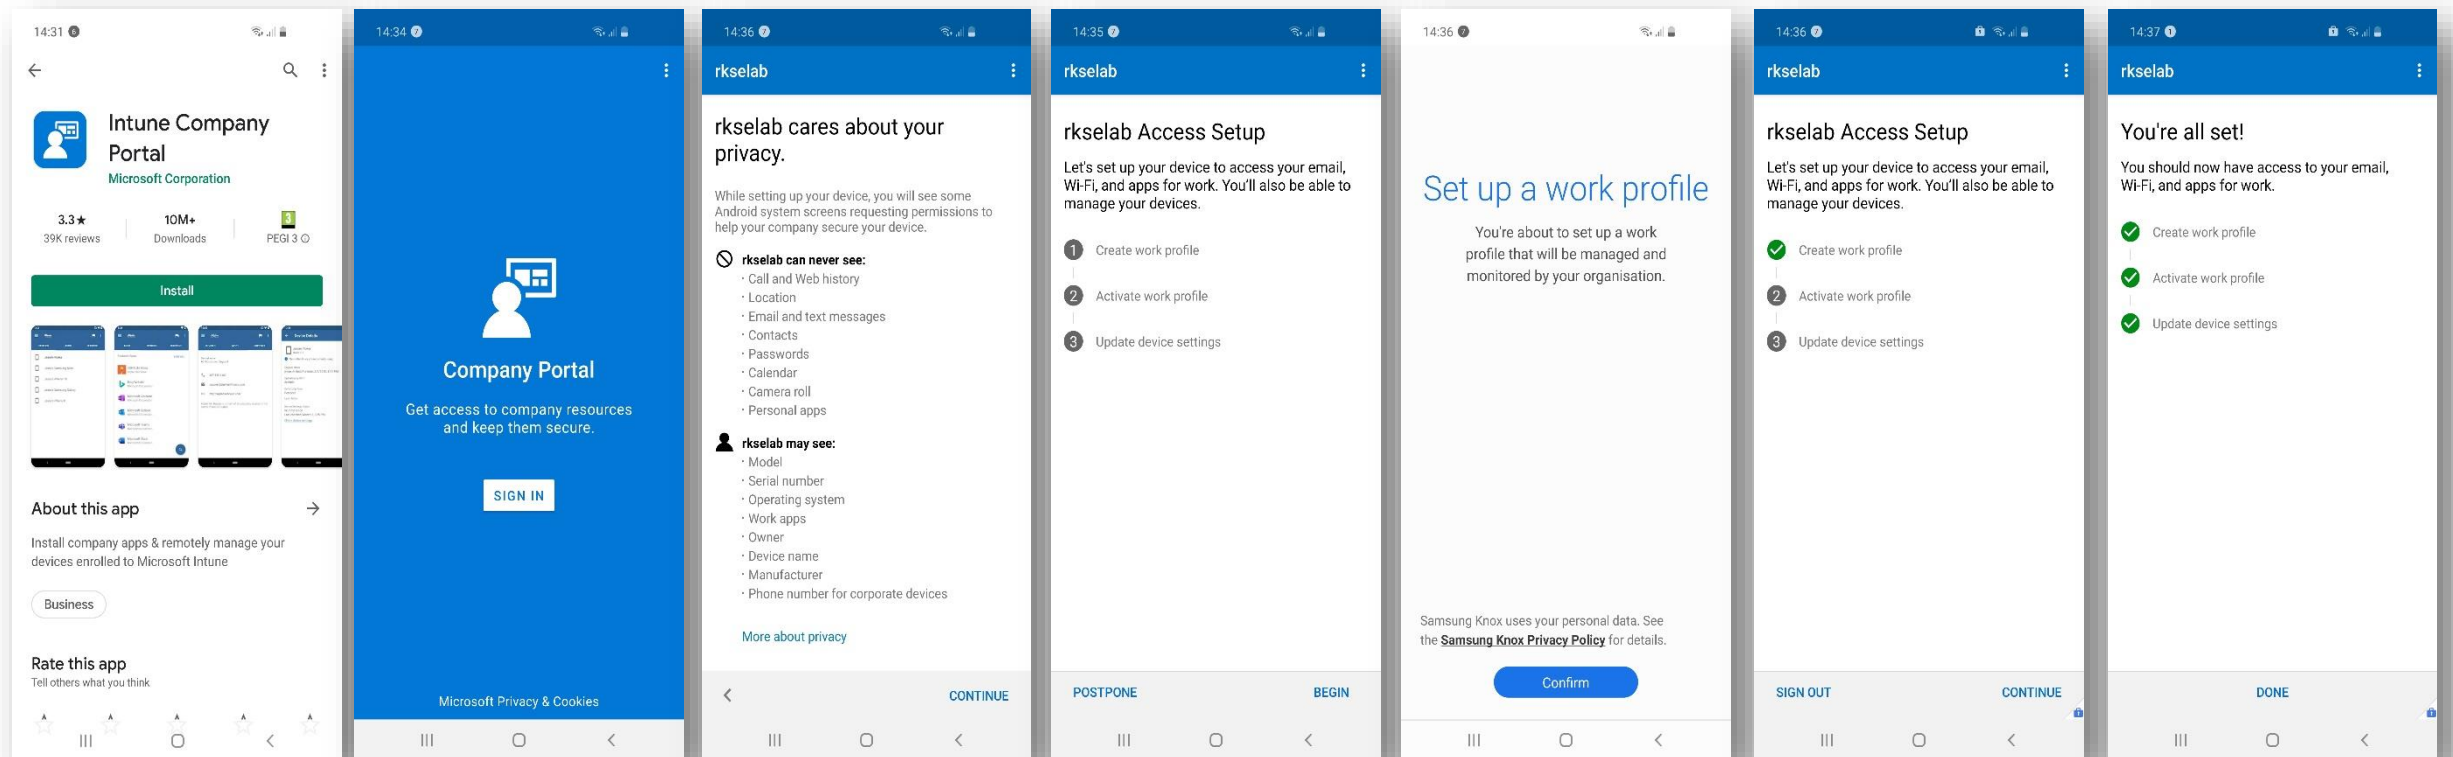

1. Work Profile [*formerly known as Profile Owner*]
2. Fully Managed Device [*formerly known as Device Owner*]
3. Fully Managed Device with a Work Profile [*formerly known as COMP*]
4. Dedicated device [*formerly known as COSU*]

Intune can support all 4 of these deployment modes. In this next section we will show you how to configure each of these 4 deployment modes in Intune for your device fleet.

Android Enterprise: Work Profile Enrollment

Once you link your Google account, Android Enterprise Work Profile enrollment is enabled by default. To Work Profile enroll, follow the below steps:

Install Intune Company Portal
From Google Play Store

SIGN IN

CONTINUE

BEGIN

Confirm

CONTINUE

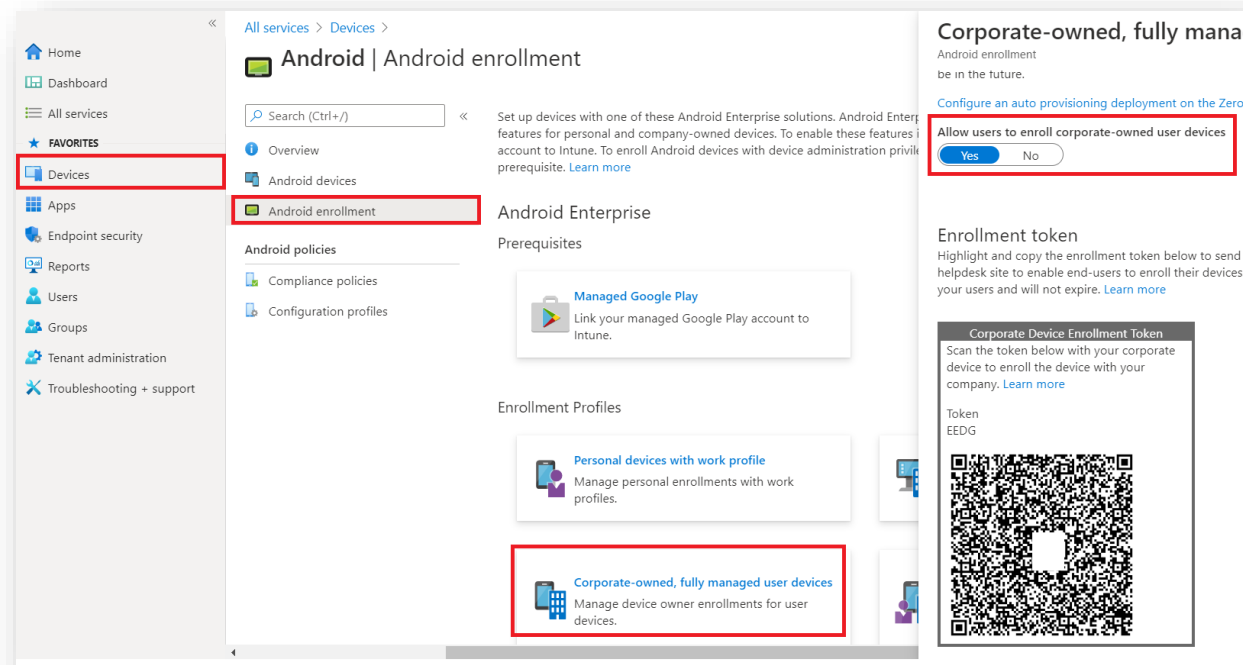

DONE

Android Enterprise: Fully Managed

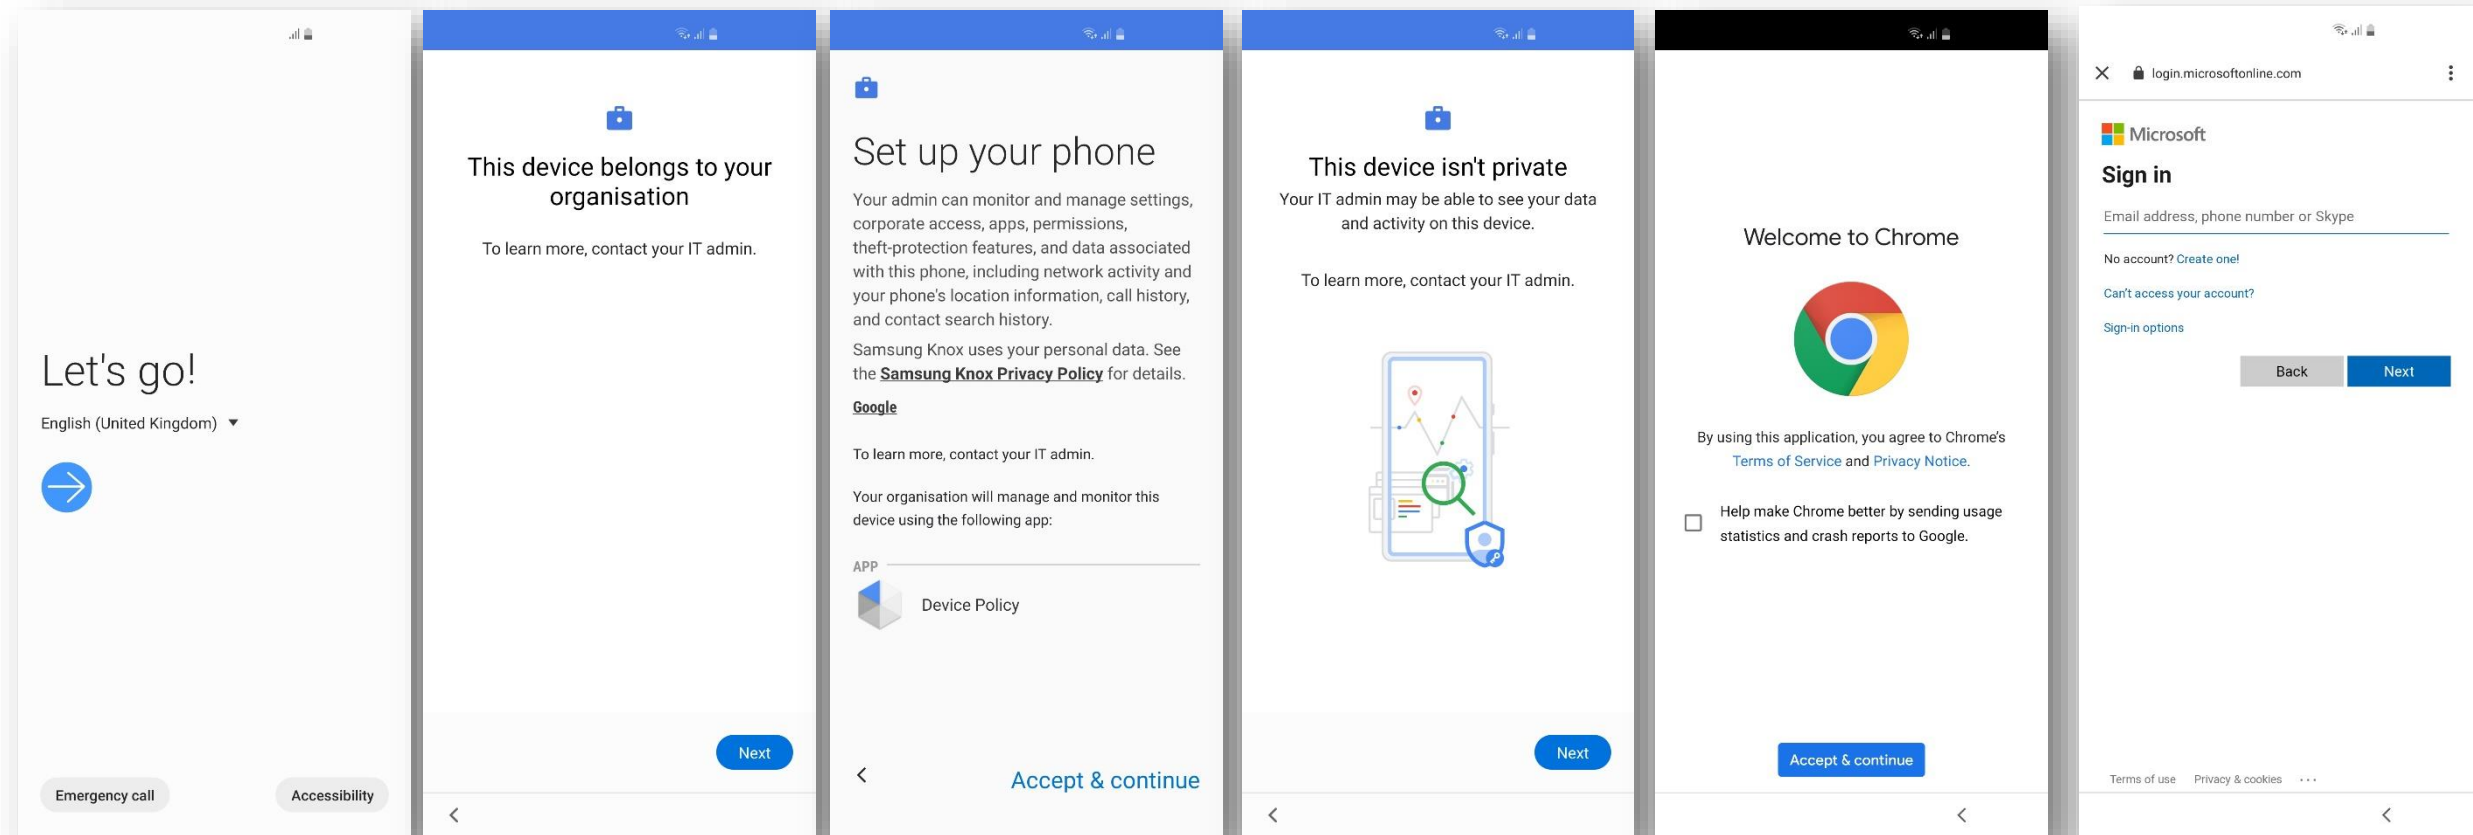

- Within Microsoft Endpoint Manager, navigate to: Devices > Android > Android enrollment
- Select Corporate-owned, fully managed user devices
- Make sure Allow users to enroll corporate-owned user devices is set to Yes
- If you're using KME, you can use the Token to simplify the enrollment steps and force the user to enroll into your tenant. Copy and paste the below JSON code into Custom JSON Data field in your KME Profile, changing YOUR TOKEN to the Token displayed in your Corporate Device Enrollment Token.

```
{"com.google.android.apps.work.clouddpc.EXTRA_ENROLLMENT_TOKEN":"YOUR TOKEN"}
```

- If you're not using KME you should provide the QR code shown under Enrollment token to your end users. You will need to print screen this or copy the image and email it to your end users. The QR code should then be scanned on the initial setup screen which is explained in the next slide.

Android Enterprise: Fully Managed Enrollment

Tap anywhere on the screen 7 times and scan the enrollment QR code

Android Enterprise: Fully Managed with a Work Profile

- Within the Microsoft Endpoint Manager console, navigate to: Devices > Android > Android enrollment
- Select Corporate-owned devices with work profile (Preview)
- Select Create profile

Android Enterprise: Fully Managed with a Work Profile

- Enter a Name, select Next
- Select a scope tag (optional) select Next
- Select Create
- To view your Token and QR code, select your profile in the profiles list
- If you're using KME, you can use the Token to simplify the enrollment steps and force the user to enroll into your tenant. Copy and paste the below JSON code into Custom JSON Data field in your KME Profile, changing YOUR TOKEN to the Token displayed in your Corporate Device Enrollment Token.
`{"com.google.android.apps.work.clouddpc.EXTRA_ENROLLMENT_TOKEN":"YOUR TOKEN"}`
- If you're not using KME you should provide the QR code shown in your enrollment profile to your end users. You will need to print screen this or copy the image and email it to your end users. The QR code should then be scanned on the initial setup screen which is explained in the next slide.

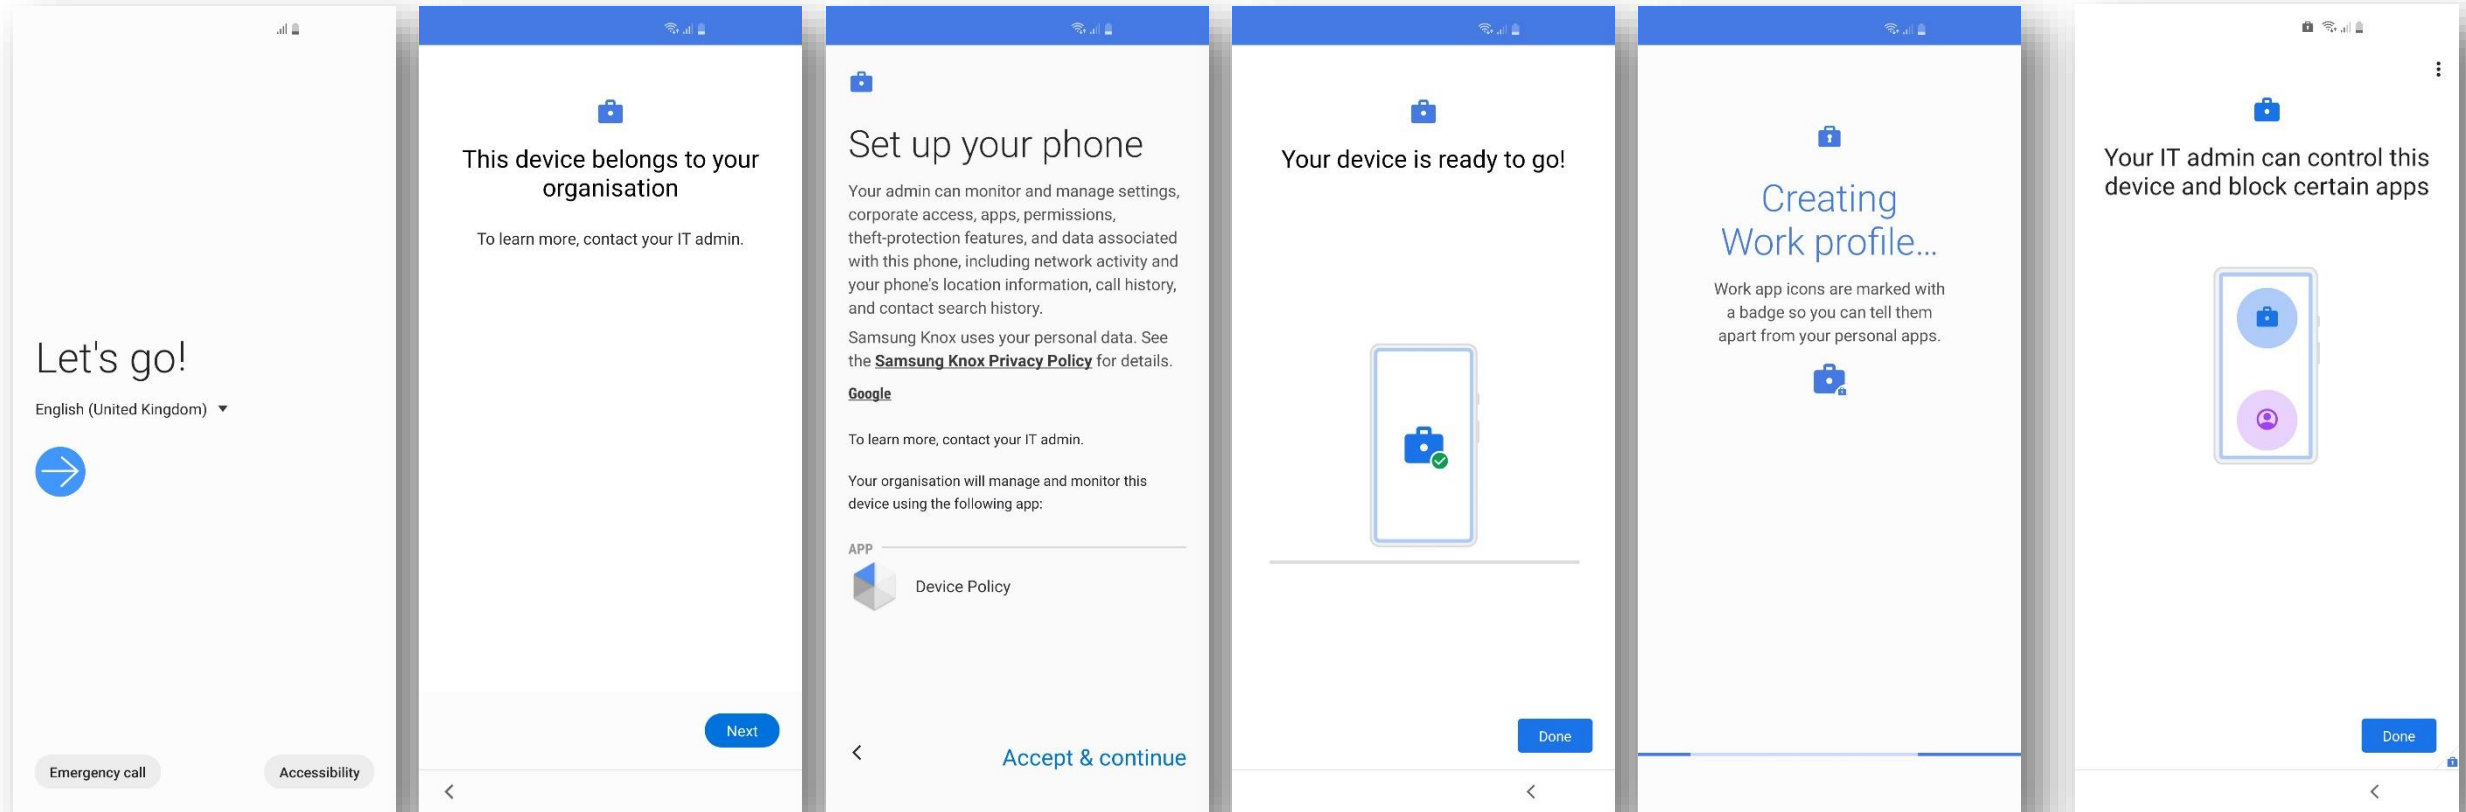

The screenshots illustrate the steps to create a Fully Managed with a Work Profile:

- Basics:** Enter the name "Fully Managed with a Work Profile" and an optional description. Click "Next".
- Scope tags:** Configure scope tags for these terms and conditions. Click "Next".
- Review + create:** Review the summary and click "Create".

The final screenshot shows the "Corporate-owned devices with work profile" list. The profile "Fully Managed with a Work Profile" is listed. A QR code is displayed for enrollment, with the token BPXT.

Android Enterprise: Dedicated Device

Create an Azure Active Directory Group

- Within the Microsoft Endpoint Manager console, navigate to Groups and select New Group
- "Group type = Security" "Group name = Name of your choice" "Group description = Optional" "Membership type = Dynamic Device"
- Click Add dynamic query
- Add the following rule:
(device.enrollmentProfileName -match "Kiosk Profile")

The screenshot displays the Microsoft Endpoint Manager admin center interface. On the left, the navigation pane shows the 'Groups' section under 'All services'. The main area shows the 'Groups | All groups' page for 'rksealab - Azure Active Directory'. A red box highlights the '+ New group' button. To the right, a modal window for creating a new group is open. It shows the following configuration:

- Group type:** Security
- Group name:** Android Enterprise Kiosk Profile
- Group description:** Android Enterprise Kiosk Profile
- Membership type:** Dynamic Device
- Dynamic device members:** Add dynamic query

The 'Configure Rules' tab is active, showing a table with the following rule:

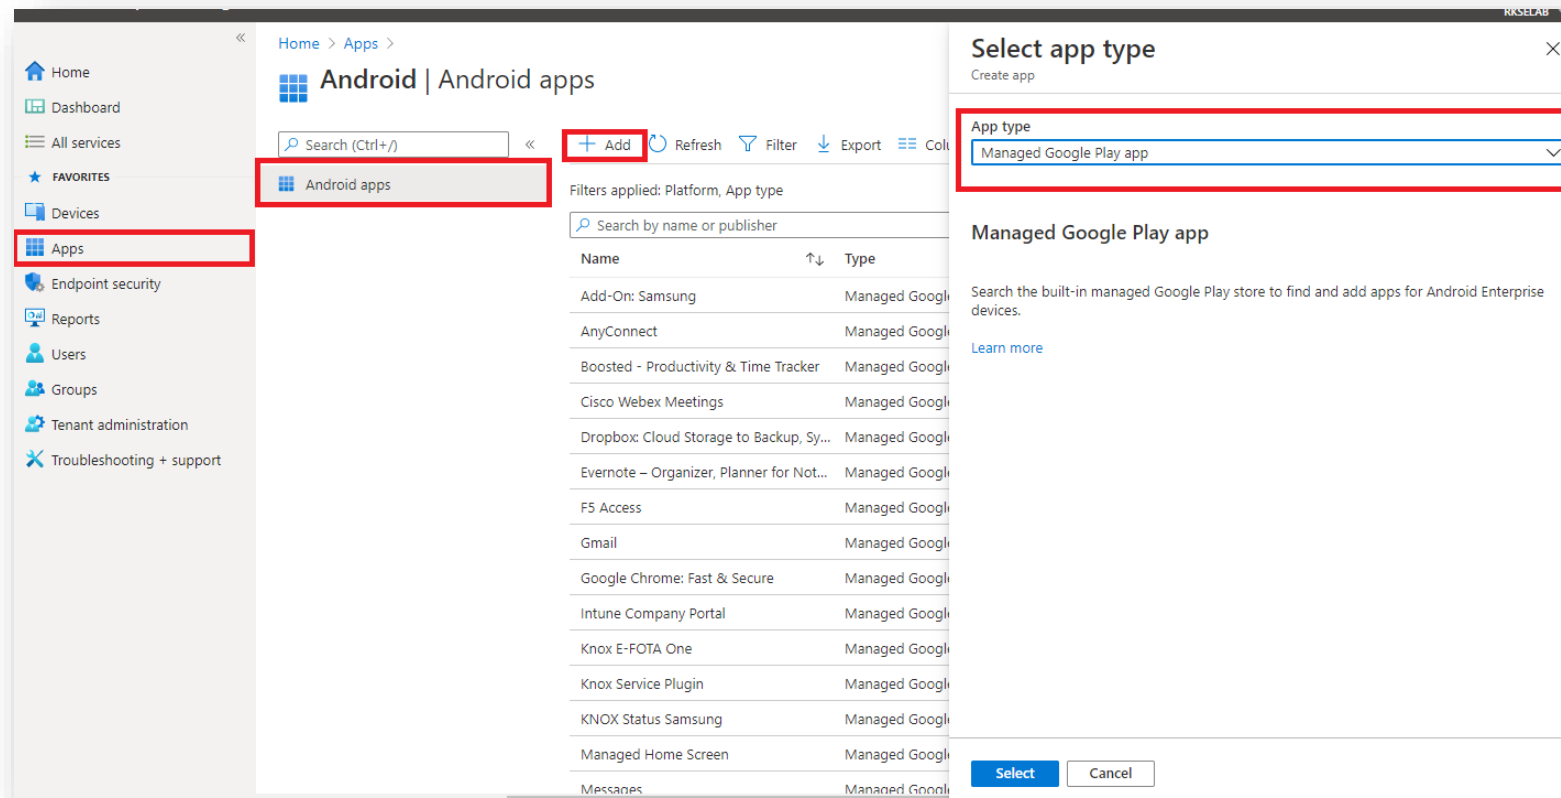

And/Or	Property	Operator	Value
	enrollmentProfileName	Match	Kiosk Profile

Below the table, the 'Rule syntax' section shows the expression: (device.enrollmentProfileName -match "Kiosk Profile")

Android Enterprise: Dedicated Device

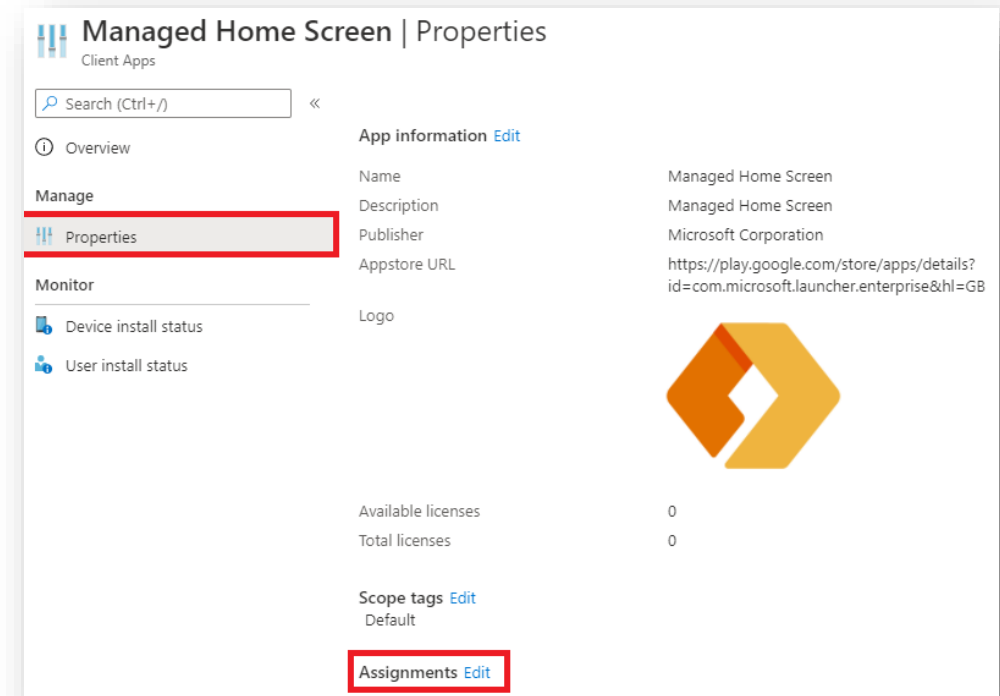

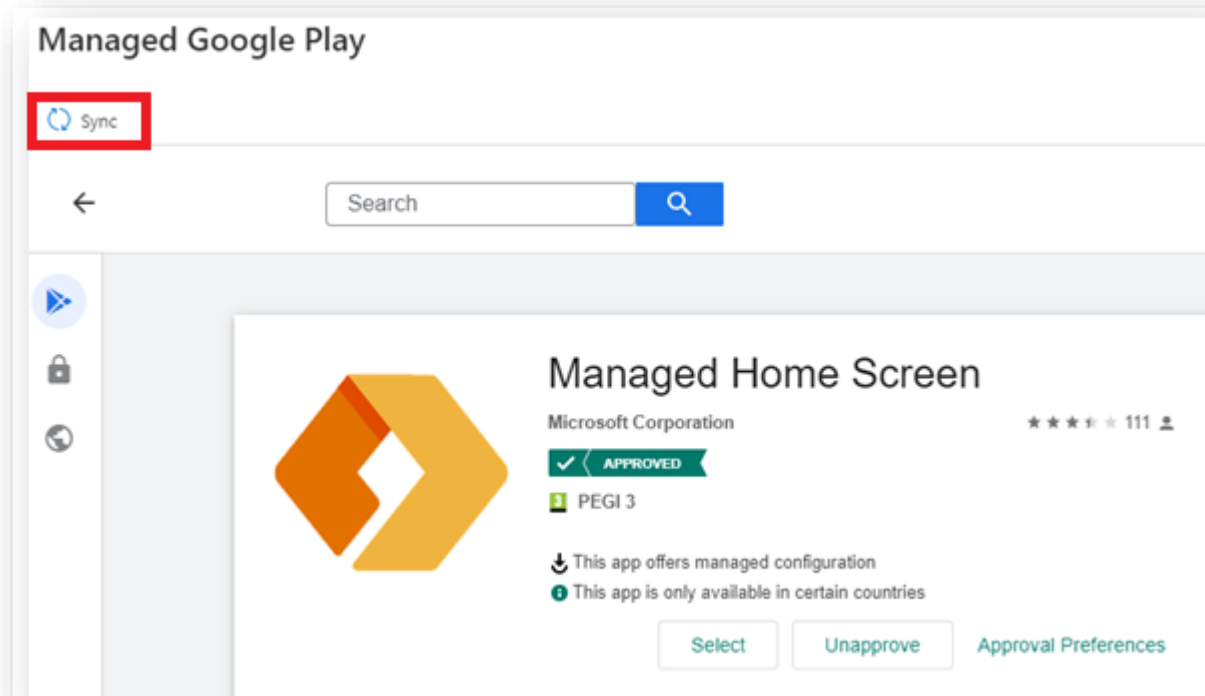

Add the Managed Home Screen

- Within Endpoint Manager, navigate to: Apps > Android apps
- Select Add
- Set the App type to: Managed Google Play app
- Click Select

Android Enterprise: Dedicated Device

- Search for the “Managed Home Screen” and approve the app.
- Press Sync to add the apps to the apps list.
- Click on the Managed Home Screen in the apps list and select Properties
- Select Edit next to Assignments

Android Enterprise: Dedicated Device

Create a Kiosk Profile

- Within Endpoint Manager, navigate to: Devices > Android
- Click Configuration profiles and then Create profile
- Set the Platform to Android Enterprise and the Profile to Device Restrictions
- Click Create

Android Enterprise: Dedicated Device

Create a Kiosk Profile

- Enter a Name and select Next
- Scroll down to Device experience
- Select Dedicated device for Enrollment profile type
- Choose whether you would like a Single or Multi-app mode
- Click Next

The screenshot shows the 'Basics' tab of the Android Enterprise console. The 'Name' field is filled with 'Kiosk Config' and has a green checkmark. The 'Description' field is empty. The 'Platform' is set to 'Android Enterprise' and the 'Profile type' is set to 'Device restrictions'. At the bottom, the 'Next' button is highlighted with a red box.

The Knox Platform for Enterprise solution provides a robust set of features on top of the core Android Enterprise platform, to fill security and management gaps and meet the strict requirements of highly regulated industries.

The Knox Platform for Enterprise solution comes in a two tiered offering:

- Knox Platform for Enterprise : Standard Edition [FREE]
- Knox Platform for Enterprise : Premium Edition [\$]

Knox Platform for Enterprise : Standard Edition offers free additional policies you can use to provide enhanced security, manageability and usability over your Samsung device fleet, running Android Enterprise on Oreo or above.

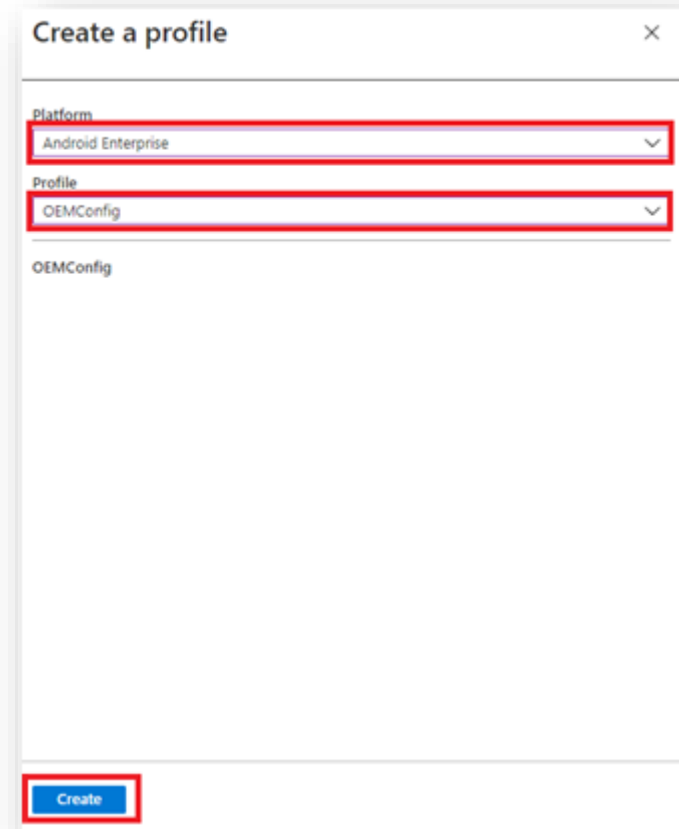

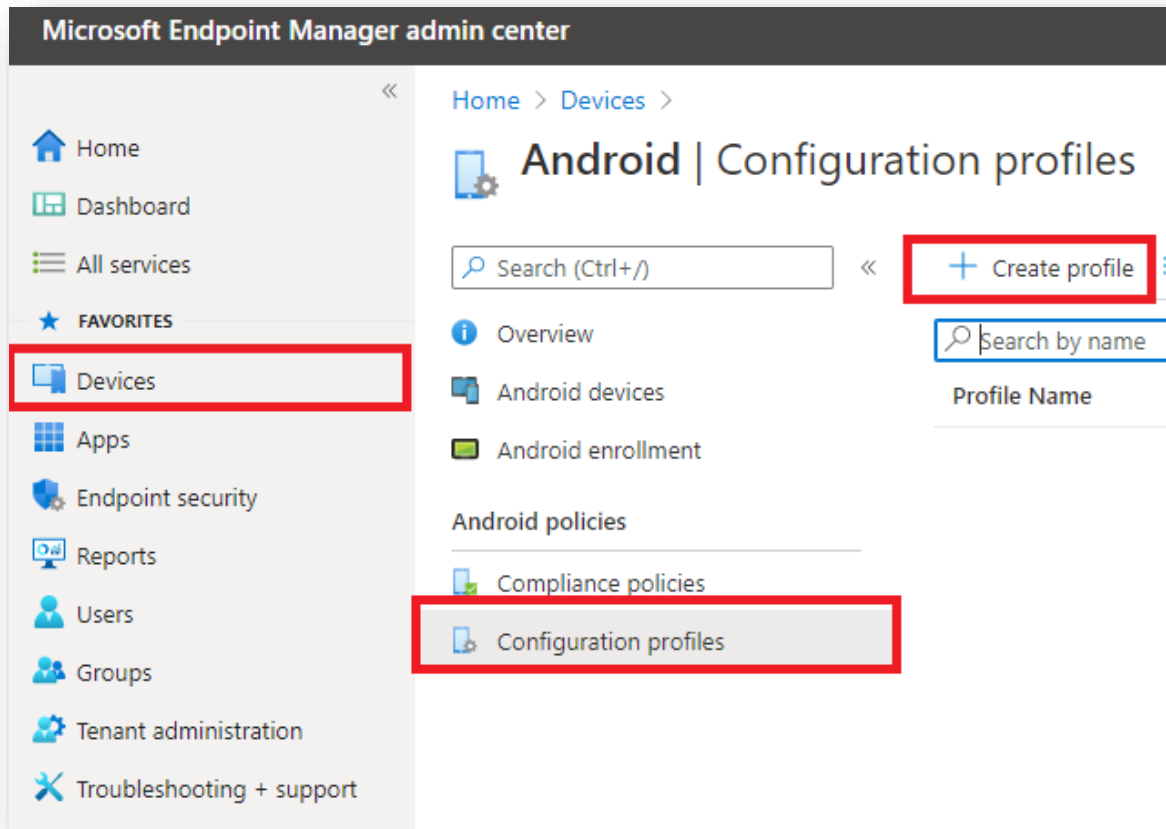

Knox Service Plugin

- Within the Endpoint Manager console, navigate to: Apps > Android apps > Add
- Set the App type to Managed Google Play app and click Select
- Search for and approve the Knox Service Plugin

The screenshot displays the Endpoint Manager console interface. On the left, the navigation pane shows 'Apps' selected. The main area is titled 'Android | Android apps' and includes a search bar, an 'Add' button, and a table of apps. A modal window titled 'Select app type' is open, showing 'Managed Google Play app' selected in the 'App type' dropdown. Below this, the 'Managed Google Play app' section shows a search bar and a 'Select' button. A second modal window, titled 'Knox Service Plugin', is shown in the foreground, displaying the app's details: 'Knox Service Plugin' by 'Samsung Electronics Co., Ltd.', with a rating of 4.5 stars (118 reviews), a green 'APPROVED' badge, and a PEGI 3 rating. The app description states: 'This app offers managed configuration' and 'This app is only available in certain countries'. At the bottom of this modal are buttons for 'Select', 'Unapprove', and 'Approval Preferences'.
